

ADITYA SARIN

Blacksburg, VA 24060, USA | (540) 824-8347 | aditya28sarin@gmail.com | aditya28sarin.github.io | linkedin.com/in/a2s

EDUCATION

Master's Computer Science | Virginia Tech | Blacksburg, Virginia May 2023
Coursework: Intermediate Data Structures & Algorithms, Software Engineering, Information Storage & Retrieval
Bachelor's Electronics and Telecom Engineering | NMIMS, School of Engineering | Mumbai, IN | **GPA: 3.7/4** May 2021

SKILLS

Web: HTML, CSS, SASS, React, Angular, Node, Django, Bootstrap, Web services, HTTP, DOM, AJAX
Programming: C, C++, Python, JavaScript, Java, Dart
Databases: MySQL, MongoDB (NoSQL), PostgreSQL
Others: AWS EC2, RDS, Unit Testing, RESTful API, GraphQL, Git, Firebase, Docker, JSON, Agile, Linux, Object Oriented Design

EXPERIENCE

Software Developer Intern | Futuryze Digital | Mumbai, IN Jan 2021 – July 2021

- Converted RPG desktop website to mobile version using SASS, driving traffic with an increase of **20%**.
- Worked with senior developers on API development using PostgreSQL thereby linking **25** API endpoints from Agora.
- Used ReactJS to connect GraphQL API with backend application, integrating Hasura and enhancing site speed by **23%**.
- Accelerated the query execution by **2.9** seconds by automating join meet functionality using NodeJS.

Software Developer Intern | Symphony Fintech | Mumbai, IN May 2019 – July 2019

- Designed XTS platform using AngularJS and JQuery along with socket.io that attracted **12,000** traders in 2 months.
- Converted **50+** wireframes into CSS and JavaScript code with Bootstrap, JQuery and MaterialUI.
- Performed Unit Testing using JUnit and used GitBucket to maintain organization code.

Co - Head | Technotix | Mumbai, IN May 2019 – Jan 2021

- Co-headed** the technical team to represent the university in World Robotics 2019, Robocon 2020, IIT Techfest 2020.
- Developed an autonomous rugby robot, 3 soccer robots, and achieved **2/58 rank** for drone competition.
- Programmed a Micro-mouse robot for shortest path algorithm such as Dijkstra's algorithm and Bellman algorithm.
- Organized technical talks and daily meetings among team members to maintain consistency on tasks assigned.

PROJECTS

Accentuate E - Commerce

- Built a large-scale app using ReactJS and Redux that keeps track of **50+** products with a backend of Django.
- Operated admin and user auth to create products, register, browse products, place orders and leave ratings.
- Maintained traffic of more than **200** weekly users and more than **80** registered members with **50+** orders.

Full Stack Blogging Application

- Created the frontend using ReactJS connecting it to MongoDB database, hosted on digital Ocean server with NGINX.
- Implemented login using JWT and social login with SEO friendly blogs, meta descriptions, **10+** tags and **5** blog categories.
- Revamped with admin CRUD operations as well as search feature with comments and pagination as extra features.

Covid-19 Safety Model

- Collaborated with 3 team members to design YoloV3 mask detection algorithm (**97%**).
- Launched website using NodeJS and Firebase for server- side rendering using Vanilla JavaScript for frontend.
- Facilitated ease of use by building an application using Flutter, displaying employee data with Bluetooth functionality.
- Strengthened end-to-end functionality with a covid-19 tracker using REST API to display statistics.

Fact - O - Pedia

- Created a full stack application using NodeJS with MongoDB, connecting ReactJS frontend and managed using Apollo.
- Built GraphQL APIs that served data to the ReactJS web application based on dynamically chosen user inputs.
- Maintained login feature with CRUD operations for the database that handled over **100+** users.

Online Book Library System using C++ and SQL

- Created a system using C++ programming language to store data from books into **20+** categories.
- Devised a model for collection of **256 books**. Employed concepts pertaining to Object Oriented Programming, Arrays, Linked list, Hash-table and AVL tree, MySQL.

ACHIEVEMENTS & ACTIVITIES

- Student Ambassador Award** for Class of 2021. Ranked **1st** in the department.
- Led team to develop and [publish](#) a Convolutional Neural Network algorithm to classify **21,000** waste images.
- Running a [Blog](#) website related to technology and learning.
- [Published](#) research "Implementation of New Approach to Secure IoT Networks with Encryption and Decryption Techniques"
- Earned project of the year for Visualization model on **47,000** entries using SASS, also creating a supervised model.
- Volunteered at Akanksha NGO to teach primary education to children with little or no access to it. (6 months)
